FIVE MEGATRENDS
INFLUENCING SUPPLY CHAIN RISK AND RESILIENCE

Bindiya Vakil CEO Resilinc

In conversation with

Tony Hines

IN THE NEWS

Join the conversation with the visionary Bindiya Vakil, CEO of Resilinc, as we unpack the transformative power of AI in risk management, reshaping the resilience of global supply chains. Bindiya talks about five megatrends shaping global supply chains: geopolitics, climate change, cyber risks, sustainability and labor disruptions.

Bindiya pivots from high-tech supply chain management to supply chain risk management and resilience. Bindiya recounts the monumental task of mapping Cisco's supply network post-Hurricane Katrina, a project that not only transitioned the company's approach from being reactive to proactive but also underscored the value of data in pre-empting costly disruptions. Bindiya elucidates the significance of transparency, trust, and robust supplier partnerships in navigating the unpredictable tides of global commerce, making it clear that these elements are more than buzzwords—they're the cornerstones of a resilient supply chain.
